How to decorate your rain barrel!

Make decorating your rain barrel a family or group project. It’s fun and easy!

- To paint a rain barrel a solid color, Krylon’s Fusion spray paints are recommended as they are designed for plastic and do not require a primer.
- To paint designs, first prime the barrel with Zinser 1-2-3 (blue can) and follow with a coat of interior/ exterior grade acrylic paint. Finally, paint your designs with acrylics.
- Display proudly and share your idea with neighbors and friends.

How can the rainwater be used?

Consider these ideas for your mineral-rich, chlorine-free rainwater:

- Attach regular or soaker hosers to the bottom spigot and top overflow valve and direct to landscaped areas nearby.
- Fill a bucket or watering can to hand-water plants in your garden and indoor plants.
- Use for pet care, from filling animal water bowls to using for pet baths.
- Use the rainwater to wash cars and bicycles.

Partial Funding to implement this program is provided by Grand Victoria Foundation.

How do I get my rain barrel?

ORDER ONLINE with HOME DELIVERY:

- Order 55 gallon rain barrels online for $70.50 (plus tax), includes home delivery in counties listed on the website: http://www.upcycle-products.com/naturalland.html
- Additional options and accessories available online

IN PERSON:

- Purchase a rain barrels at selected NLI events to be announced

A portion of the rain barrel and accessories sales will be donated to Natural Land Institute.

Rain Barrels are just one element of Natural Land Institute’s Conservation@Home education and recognition program for homeowners. If you are incorporating native plants and water conservation features like rain barrels in your home landscape, you should be recognized for your efforts with Conservation@Home certification! Criteria for certification includes:

- Landscaping featuring native plants.
- Creation and protection of natural areas with steps taken to control invasive plant species.
- Efforts to reduce erosion and conserve rainwater on property.

What are rain barrels?

A rain barrel is used to collect and store rainwater runoff, typically from rooftops. Instead of running down driveways and sidewalks to sewers, rainwater is collected into a rain barrel where it can be stored for use in gardens, to water house plants, for pet care and to wash cars. Rain barrels are a simple, efficient, low-cost method for homeowners to conserve water.

Why are rain barrels beneficial?

- It is estimated that during the hot summer months, the average homeowner uses 40 percent of household water in the yard. The mineral-rich and chlorine-free rain that falls on roofs can be used to offset household water usage and reduce water bills.

- A quarter-inch of rain falling on the average roof yields more than 200 gallons of water. In the northern Illinois area, the average annual rainfall is more than 30”, meaning every household could collect 24,000 gallons of water a year in rain barrels!

- Conserving the rain that falls on our properties helps recharge our water supply and assists with flood control by reducing the stress on our rivers and streams.

- Collecting rainwater where it falls reduces the negative impacts of having it run down driveways and lawns, where it picks up pollutants like motor oil and pesticides and carries them into our rivers and streams.

What are the features of the rain barrels?

- They are 55-gallon containers, stand about 48” high and weigh 400 pounds when full of water.

- Made of food grade recycled plastic containers which can be painted, rain barrels are available in a variety of colors (choice varies and cannot be guaranteed).

- They are sealed to keep them safe around children and animals.

- The screw-off lid is equipped with a screen to keep debris and insects from the water.

- A valve on the bottom of the barrels to which a hose is attached makes the captured rainwater available through a simple gravity system.

- A connector at the bottom can be used with a hose to connect to a second barrel.

How are rain barrels installed and used?

- Rain barrels work best when placed on a stand or concrete blocks under a downspout. The added height increases water pressure and provides space for a bucket or watering can to be placed under the valve.

- Once the barrel is positioned on the platform, measure and cut the downspout to a length just above the top of the barrel. Downspouts can be cut with a hacksaw. Save the cut-off for reattachment in the winter.

- Attach two elbows or a 2” by 3” flex-elbow connector (available at most hardware stores and home centers or on our website) to the downspout to direct water to the top of the barrel.

- To use, attach a hose (a soaker hose is great) to the bottom valve and direct to landscaping, or simply fill buckets or watering cans to wash vehicles or water plants.

- The ideal time to install rain barrels is when the rainy season begins in the spring. In the fall, empty the barrel and store it upside-down. Then replace the downspout.

About Natural Land Institute

**Natural Land Institute** is a 501(c)3, non-profit land trust and conservation organization based in Rockford, Illinois, which has protected more than 17,300 acres of natural land in Illinois since 1958. NLI’s current service area covers twelve counties in northern Illinois. NLI’s mission is to create an enduring legacy of natural land in northern Illinois for people, plants and animals.
