

# Family Nature Adventures Field Activity

Find a nice place (your back yard, a park, etc.) where you can watch for birds. If you have a pair of binoculars, feel free to bring them along. Try to sit quietly for at least 30 minutes although, if you're up for it, an hour would be even better! On the form below, put a tic mark next to the main colors on every bird you see. (If a bird has two main colors, put a tic next to both colors!)

Name: \_\_\_\_\_ Date: \_\_\_\_\_ Time: \_\_\_\_\_

COLOR	NUMBER OF TIMES (in tic marks) I SAW THIS COLOR ON A BIRD	TOTAL
BLACK		
GRAY		
WHITE		
BROWN		
RED		
BLUE		
YELLOW		
OTHER		

When you're done, total up the tic marks on the far right column of each color to answer the following questions:

1. What was the *most* common color among the birds that you saw?
2. What was the *least* common color among the birds that you saw?
3. Did you see any birds that were blue? (blue jays, eastern bluebirds, indigo buntings)
4. If you saw birds that were blue, how many of those were eastern bluebirds as described in the video?
